

Android and iOS Mobile App Proposal For Astrology Consultation Services

| Phases

PHASE 1: PRE-PLANNING FOR HOW TO BUILD AN APPLICATION

The first phase of any project is often the most important. When building an application, it's critical to take the time to go through the necessary planning steps.

Step 1: Define the project and create use cases. Create a written definition of your app idea that clearly spells out what it will do, who the users are and why they will care about it. Make sure you can answer the question “why does this app need to exist?” What unique problem does it solve? Will the application simplify payment transactions for customers? Will it increase productivity for field agents? What is the business case? Use this information to create use cases to guide the project.

W: www.appslure.com

Step 2: Do your research. Is there already an app on the market similar to the one you are thinking to build? If so, how can you do it better?

PHASE 2: MENTAL PROTOTYPING / DISCOVERY

A mental prototype is a brainstorm to help define a concept in visual terms. It's the first opportunity to start to see how the app might evolve...and to get a reality check.

Step 3: Involve the development team or technical architect. Ideally, the development team is involved at the beginning of the project, but if the technical people who are actually going to build your application aren't already on board, now's the time to bring them in. This is when you can determine if your idea is feasible, can be successful and what expectations you should have for time and budget.

Step 4: Storyboard. With the use cases you created in Phase 1, create rough sketches of the idea on a sketchpad, whiteboard, or template tiles. This is the first visual representation of all the screens and will help uncover usability issues.

PHASE 3: TECHNICAL FEASIBILITY ASSESSMENT

It's not enough to have cool interactions and an understanding of the visuals. You need to consider whether the back-end systems will actually support the application's functionality. For basic assessment of technical feasibility, you must do the following:

Step 5: Get access to the data. Your application needs to access usable data. Figuring this out could be as simple as sourcing a Public APIs or as complicated as building your own abstraction layer.

Step 6: Determine what devices you are building your application for.

An application will have different requirements depending on its platform as well as the format

Step 7: Refine project definition and establish go-to-market strategy. By the end of this phase, the team may have new ideas for the application or have determined that some of the initial functionality isn't feasible. At this point, take some time to brainstorm, ask questions and review the status.

PHASE 4: TACTILE REFINEMENT OF USE CASES

It's very difficult to define the experience without being able to touch the application and experience how it works and flows. Phase 4 is about just that.

Step 8: Build a rapid prototype. "Rapid" is the operative word – build a prototype that gets the application *concept* into a user's hands as quickly as possible so you can see how it works for the most common use case. Use rough, not exhaustive, wireframes. Bring your users in to touch the prototype to garner feedback as early as possible.

PHASE 5: DESIGN YOUR APPLICATION AND PREPARE FOR DEVELOPMENT

Now is when the real work begins:

Step 9: Design for the user experience. Before you dive into code, you must design. A User Experience (UX) Designer can create the interaction architecture of the design elements. A User Interface (UI) Designer for mobile solutions can create the look and feel of your application. This is a multistep process with its own review stages. The end result is visual direction and blueprints that inform your engineers of the envisioned final product and how interaction should feel, move and flow.

PHASE 6: BUILD YOUR APPLICATION WITH AGILE PRACTICES

The strategy is complete, the stage is set, and you have your design. It is now time to build an application!

Step 10: Agile Development. Agile is the preferred approach for mobile development due the importance of collaboration, transparency, and rapid iteration to adapt to change. These practices of adapting to change are critical to finding success in the ever-evolving mobile channel.

Appslure Confidential

Proprietary Information: This document contains proprietary information about Appslure, and is the proprietary of Appslure. It is not to be disclosed, in whole or in part, to third parties without the express written authorization of each of the owning parties. All versions distributed, including electronic submissions, shall not be duplicated, in whole or in part, for any purpose other than to evaluate this proposal, and shall be returned upon request.

W: www.appslure.com

PHASE 7: TEST YOUR APPLICATION

Congratulations! You have built an application. Now it's time to get some of your target users to help you test it.

Step 11: UAT testing. User acceptance testing is a process to discover whether your application works for users. In other words, put your application in the hands of a few people in your target audience. Once your application has passed the UAT test, you know that the solution “works”.

Step 12: BETA testing. Make your application available for a beta trial, either through an open solicitation for participants or the enrollment of previously identified groups. Feedback from beta users will help you determine whether or not the application's functions are operating well in a real-world environment.

PHASE 8: LAUNCH – YOU BUILT AN APPILCATION!

Your application is complete and ready to submit. Pick a day and key up a formal launch. Congratulations! You have learned how to build an application!

Scope

We need to design and develop app for Customers and Astrologers. The solution will consist of User App, Astrologer App and Admin Dashboard.

Admin Dashboard is a web-based panel where you can manage and monitor the complete activity of the App.

Total Solutions:

- 1. Customer**
 - a. Android
 - b. iOS
 - c. Landing Page
- 2. Astrologer**
 - a. Android
 - b. iOS
- 3. Admin**
 - a. Web Admin Panel

Customer Side Features

User Side Features:

- Splash Screen
- Tutorial Slides
- Registration
 - Register with Google / Mobile Number
 - Mobile number Verification (OTP)
 - User can skip the registration process initially
 - Once this step is complete then either
 - User can skip completing the profile and can update the birthdate at the time of availing any service
 - Proceed to next step and complete the birth data
- Acceptance of Terms & Condition
- Login Button
- Forgot Password Management
- Redirect to Home
- Create Profile
 - User will be able to upload the detail (Name | DOB | TOB | POB | etc.) which can be viewed by Astrologer

Appslure Confidential

Proprietary Information: This document contains proprietary information about Appslure, and is the proprietary of Appslure. It is not to be disclosed, in whole or in part, to third parties without the express written authorization of each of the owning parties. W: www.appslure.com

- User can create multiple profiles (myself, mother, farther etc. Upto 5)
- My Account
 - Profile
 - Create Profile
 - Create Sub Users
 - Wallet Transaction
 - Recharge Wallet
 - Refund
 - Order History
 - Chat
 - Call
 - Video
 - Reports

All the above will show order id, date and time, duration along with Astrologer details

- Notifications
- My Language (preferred language for calling with Astrologer)
- Support (customer care mobile number)
- Rate App
- Share
- Logout
- Homepage
 - Main Verticals
 - a. Chat
 - b. Call
 - c. Video
 - d. Reports

| Chat With Astrologer

- i. User will be able to view all the astrologers which match with their language preference
- ii. User can also filter astrologers and sort them based on:
 1. Expertise
 - a. Vedic Astrology
 - b. Tarot Card Reading
 - c. Numerology
 - d. Vaastu
 - e. Fengshui
 - f. Kp Astrology

- g. Prashna Kundali
- 2. Language (typing language will be English)
 - a. Language 1
 - b. Language 2
 - c. Language 3
 - d. So on...
- 3. Experience
 - a. Experience: High to Low
 - b. Experience: Low to High
 - c. Rating: Low to High
 - d. Rating: High to Low
 - e. Price: High to Low
 - f. Price: Low to High
- 4. Rating
 - a. All Rating
 - b. 3 Star and Above
 - c. 4 Star and Above
- 5. Pricing
 - a. Upto Rs. 20
 - b. Between Rs. 20 – Rs. 50
 - c. Above Rs. 50
 - d. So On..
- 6. Status
 - a. Online
 - b. Busy (wait time)
 - c. Offline (next online available time)
- 7. Astrologers Listing Page
 - a. There will be 3 astrologers profile in one row
 - b. There will be total 4 columns of astrologers profile in one go
 - c. After 4 columns “View More” button will come, which once clicked will show further list of astrologers
- 8. User can view Astrologer’s Profile (card View)
 - a. Astrologers Image
 - b. Astrologers Name
 - c. Expertise
 - d. Preferred Language
 - e. Experience
 - f. Price
 - g. Ratings
- 9. On clicking on the card view user will be taken to detailed Astrologers profile page
 - a. Astrologers Name
 - b. Spoken language

- c. Years of Experience
 - d. Areas of Expertise
 - e. Total chat Mins
 - f. Total call Mins
 - g. Total Video Mins
 - h. Total Reports Generated
 - i. About Astrologer
 - j. Total Rating
 - k. Reviews
10. Against each Astrologers their status will be visible
- a. Online
 - i. Astrologer is available for chat instantly
 - b. Busy
 - i. Astrologer is already chatting with another user
 - ii. User can click “**show interest**” button
 - iii. User will get notification once Astrologer is available
 - c. Offline
 - i. Astrologer is not available to take chats
 - ii. User can set alert to get notified once the astrologer is available
11. In order to avail the service min 5 mins of balance should be available in the User’s wallet otherwise User will be prompted to add money to their wallet
12. User will be charged for per min consultation
13. Once User request for chat he will get alert and needs to accept the chat request
14. Once user accept the request he will be taken to new page where he will see estimated wait time to connect with the astrologer
15. Once connected with the astrologer chat window will open and he will receive welcome message from the system and will be prompted to start asking the questions
16. Astrologer will reply to the queries
17. User will have the option to end the chat
18. Wallet money will be deducted as per the mins consumed
19. Once the wallet money is exhausted chat will end
20. Once the chat is over user will be asked to provide rating and review
21. User chat history will be maintained and user can view transcript of the chat later also
22. User can raise an issue after the service is completed

| Call to Astrologer

- i. User will be able to view all the astrologers which match with their language preference
- ii. Category wise segments (finance/ love/ etc.)
- iii. User can also filter astrologers and sort them based on:
 1. Expertise
 - a. Vedic Astrology
 - b. Tarot Card Reading
 - c. Numerology
 - d. Vaastu
 - e. Fengshui
 - f. Kp Astrology
 - g. Prashna Kundali
 2. Language
 - a. Language 1
 - b. Language 2
 - c. Language 3
 - d. So on...
 3. Experience
 - a. Experience: High to Low
 - b. Experience: Low to High
 - c. Rating: Low to High
 - d. Rating: High to Low
 - e. Price: High to Low
 - f. Price: Low to High
 4. Rating
 - a. All Rating
 - b. 3 Star and Above
 - c. 4 Star and Above
 5. Pricing
 - a. Upto Rs. 20
 - b. Between Rs. 20 – Rs. 50
 - c. Above Rs. 50
 6. Status
 - a. Online
 - b. Busy
 - c. Offline
 7. Astrologers Listing Page (design part and can be changed)
 - a. There will be 3 astrologers profile in one row
 - b. There will be total 4 columns of astrologers profile in one go

- c. After 4 columns “View More” button will come, which once clicked will show further list of astrologers
8. User can view Astrologer’s Profile (card View)
 - a. Astrologers Image
 - b. Astrologers Name
 - c. Expertise
 - d. Preferred Language
 - e. Experience
 - f. Price
 - g. Ratings
9. On clicking on the card view user will be taken to detailed Astrologers profile page
 - a. Astrologers Name
 - b. Spoken language
 - c. Years of Experience
 - d. Areas of Expertise
 - e. Total chat Mins
 - f. Total call Mins
 - g. Total Video Mins
 - h. Total Reports Generated
 - i. About Astrologer
 - j. Total Rating

10. Against each Astrologers their status will be visible
 - a. Online
 - i. Astrologer is available for call instantly
 - b. Busy
 - i. Astrologer is already call with another user
 - ii. User can click “**show interest**” button
 - iii. User will get notification once Astrologer is available
 - c. Offline
 - i. Astrologer is not available to take calls
 - ii. User can set alert to get notified once the astrologer is available
 - iii. Estimated time when Astrologer will be online
11. In order to avail the service min 5 mins of balance should be available in the User’s wallet otherwise User will be prompted to add money to their wallet
12. User will be charged for per min consultation
13. Once User request for call he will get alert and needs to accept the call
14. Once user accept the request he will be taken to new page where he will see estimated wait time to connect with the astrologer
15. Incase user is not connected within the estimated time then it will get cancelled
16. Once connected with the astrologer call timer will start
17. User will have the option to end the call

- 18. Wallet money will be deducted as per the mins consumed
- 19. Once the wallet money is exhausted call will end
- 20. Once the call is over user will be asked to provide rating and review

| Video Call with Astrologer

- i. User will be able to view all the astrologers which match with their language preference
- ii. User can also filter astrologers and sort them based on:

Technology Stack

React Native Android & iOS App	Web Backend
- App side : React Native - App Ui : XML - App design tool : Sketch - App DB- ROAM - App state management : REDUX - Web services : Retrofit - App Data : JSON - Real Time DB : Firebase - Push notifications : Firebase or onesignal	- Backend scripting language : PHP Laravel - Backend/website (landing) HTML5

*iOS app Approval subject to Apple Store

Server Requirements

Hardware:

This application would require server with 4 core, 16 GB ram and 300GB hard disk space initially. However, we will have to increase the server Configuration as and when the system users increase overtime.

Server configurations:

1. Operating system: Linux (prefer CentOS)
2. Database: MySQL
3. Security: firewall, antivirus
4. Load Balancing: optional at initial level

| Third Party Services/ API'S to be provided by client

1. Server: AWS
 - a. Approx. Rs.5000 – Rs.6000 initially but as you grow pricing will dynamically increase
 - b. <https://aws.amazon.com/pricing>
2. SMS (OTP + Transactional)
 - a. <https://msg91.com/sg/pricing/> (approx. 22 paisa), we can opt for some other provider also
3. Android Developer License
 - a. 25 USD
4. Apple Developer License
 - a. 99 USD / Year
5. Firebase - Free for now
6. Video, Audio, Chat: Agora
7. IVR optional
8. Payment Gateway <https://www.cashfree.com/payment-gateway-charges>
9. Load Balancer - \$0.0239 per Application Load Balancer-hour
10. Cloud Flare – 25 USD / Month
11. SSL Certificate – Rs. 8000 / Year
12. Astro Reports API

| Team

- **Android Developer**
 - 1 Developer – Btech experience 5 years and above
- **iOS Developer**
 - 1 Developer – Btech experience 5 years and above
- **Backend**
 - 1 Developer PHP Expert (5 years in Experience)
- **Database and Webs services**
 - 1 MY SQL Expert (Database Administrator, 5 years in Experience (MS-IT)

 - 1 Selenium Expert (5 years' experience and MS (IT)
- **UI/UX Designer**
 - 1 Adobe XD Expert – 8 years of experience in Full Stack Adobe cloud
- **Project Manager**
 - 1 Project Manager – Has Handled more than 70 Applications and Happens to be in senior Management. BTECH, MBA (Both in IT Major)

Process

Discovery

We work with clients to understand their business and we merge their initial concept with everything the Appslure team knows about mobile. We'll assess the possible challenges and identify the ways to overcome them.

Features & Architecture

We establish what features go into the product and how they will work together. Here, we're drafting a skeletal framework for the app in the form of wireframes.

Design

When it comes to first impressions, it's all about design. We'll put our passion for good design to work and based on approved wireframes we'll design all screens.

Development

The development process is broken down into sprints based on feature sets. Our agile-based development process will allow you to regularly review and assess what we're building.

Quality Assurance

Our Quality Assurance team will test the app after each development sprint and once all major functionality is implemented, we'll prepare a Beta Build.

Launch

After passing the Beta Build through a final round of QA and refinements, we'll have in our hands a Release Candidate Build. We can either submit the app to the App Stores or provide you with everything you need to do it yourself.

Maintenance

02 months support for any bug fixing, app crash and ANR after the app is live

Cost & Time Estimations

Task/Module	~Production Time Working Days	Total Cost (in INR)
PSD Designing and UI/UX and XML Designing	10 Days	
Web-Services, Database and Coding	40 Days	
Design and Development Days	10 Days	
Total	60 Days	4,00,000

GST (18%) extra as applicable. 3rd Party API's / Server / Licenses to be provided by client.

Website will Cost Rs. 4 Lakh extra

Payment Terms

- 25% Upfront to start the project
- 25% After design and database structure is complete
- 25% Before handing over for testing to Client
- 25% After all the testing is done before making the App LIVE

Support

2 months support will be providing for any type of bug fixing after going LIVE

Ownership Rights

Once complete payment is done by the client, all the code will be handed over to the client. Client will have complete ownership of the code.

Conclusion

We would like to thank you for giving us the opportunity to work on your project. We look forward to start this project and adding value to your online business model.

Sincerely,
Team Appslure
